

ADVANTAGES

- Allows monitoring of multiple dust collectors at different facilities
- Reducing downtimes
- Secure data transmission
- Enables predictive maintenance
- Remote monitoring of filter condition

Installation Options

Camfil's GoldLink sensor can be installed in all Gold Series dry dust collectors.

Comment

- Monitoring: daily average readings of main filter cartridge DeltaP condition & installed optional secondary filter stage DeltaP condition
- Simple installation: installs easily onto any new or existing dust collector, simply connect differential pressure tubes and apply power
- Data security: all data sent through the global LTE & 3G network is fully encrypted end to end
- Network isolation: provides a fully isolated cloud connection without going through plant networks
- Enclosure IP66 rating: with external antenna for enclosure in harsh industrial locations
